

Breakout Group Activity: “What Kind of Solutions Does India Need?” as required:

1. Diverse languages, religions

- **Solution Needed:** Small solutions; both local and national solutions.
 - **Logic:** India’s diversity requires tailored solutions that are effective at small (community/local) scales, but can also scale up nationally where needed.
-

2. Densely populated, crowded

- **Solution Needed:** Digital solutions; environmentally sustainable solutions.
 - **Logic:** Dense populations benefit from scalable digital technologies and need eco-friendly approaches to avoid exhausting resources and worsening pollution.
-

3. Large BPL (Below Poverty Line) sector

- **Solution Needed:** Affordable solutions.
 - **Logic:** Solutions must be designed to be accessible and affordable for economically weaker sections to ensure inclusivity.
-

4. Heavily agricultural

- **Solution Needed:** Rural solutions; low-water-use solutions.
 - **Logic:** Agriculture dominates rural India—focus on supporting rural areas with water-saving technologies and farming innovations.
-

5. Inadequate infrastructure

- **Solution Needed:** Digital solutions; corporate (not just government) solutions.
 - **Logic:** Infrastructure gaps can be overcome using digital tech and by involving private sector innovation, not focusing only on government projects.
-

6. Low tax base (less tax revenue)

- **Solution Needed:** Affordable solutions; small solutions; alternative energy solutions.

- **Logic:** Limited government funding means solutions must be cheap, scalable, and use renewable resources to keep long-term costs low.
-

7. Dry rainfall, groundwater stress

- **Solution Needed:** Low-water-use solutions; alternative energy solutions.
 - **Logic:** Water scarcity requires conservation and alternative (renewable) energy sources, reducing pressure on water supplies.
-

8. Polluted air and water

- **Solution Needed:** Environmentally sustainable solutions.
 - **Logic:** High levels of pollution demand eco-friendly, sustainable methods to reduce harm to health and the environment.
-

9. Petroleum poor (energy scarcity)

- **Solution Needed:** Alternative energy solutions.
 - **Logic:** Limited petroleum reserves require a transition to renewables (solar, wind, biogas, etc.) to secure India's energy future
-
